Getting started at an AWS hosted workshop

Overview

If you are attending an AWS hosted event, you will have access to an AWS account with any optional pre-provisioned infrastructure and IAM policies needed to complete this workshop. The goal of this section is to help you access this AWS account. You may skip this section if you plan to use your own AWS account.

Best Practices

- Review the terms and conditions of the event. Do not upload any personal or confidential information in the account.
- The AWS account will only be available for the duration of this workshop and you will not be able to retain access after the workshop is complete. Backup any materials you wish to keep access to after the workshop.
- Any pre-provisioned infrastructure will be deployed to a specific region. Check your workshop content to determine whether other regions will be used.

Accessing your AWS Account

After joining the event, you should see the page with event information and workshop details. You should also see a section titled "AWS account access" on the left navigation bar. You can use these options to access the temporary AWS account provided to you.

AWS Management Console

© 2008 - 2025, Amazon Web Services, Inc. or its affiliates. All rights reserved.

[Privacy policy](#)[Terms of use](#)[Cookie preferences](#)

Management Console home page. This is the standard AWS Console that provides access to each service. Please note that the infrastructure associated with the workshop will be deployed to a specific region and can be only accessed from that region.

Summary

Once you've verified access to the AWS account provided to you and any relevant resources in that account, you should have everything you need to get started with this workshop. In this section, you were introduced to accessing the AWS account that is pre-provisioned with infrastructure necessary for this workshop.
